Title : President Science Scholarship Result.

Late-february, I applied president science scholarship. And then, late-March, I had a interview about this. Tell the conclusion first, I was rejected in the interview screening. When interview day, my condition was not great. Also, after I had a interview, I had negative feeling about the interview. I think it is very unfortunate.

But, I had worth a fortune! Some people got the president science scholarship. And cancel the natural sciences scholarship. Department of computer engineering officer called me and told about this. So, I got a change to apply natural sciences scholarship and finally I granted the scholarship. I was very great.

Title : Midterm Exams

I was undergoing the midterm exam periods and I was worried because it's the very first exam of my college time. My exam schedule lasts for about one month which is longer than most of the students. Compared to high school, the duration was much longer.

From April first to today, there are so many midterm exams. I took a test about physics, statistics, economy, math(calculus), English, statistics experiment. Some exams was very hard but some exams was very easy.

I think I received good grades which is top 20% of the overall students. I think it's important to have the knowledge that is required and necessary. Being first can be considered the best but is not a priority.
